

I have been a member of the Mathematics Department since 1998 and am currently the elected representative of faculty on the College Board. I am requesting that you consider my qualifications and experience and support my re-election.

My studies and teaching in Mathematics, as well as my time as Department Chair, have proven useful in making positive contributions to various Board committees that I have served on, including the Technology Steering Committee and the Audit and Finance and Investment Committee. My service as Douglas College Faculty Association (DCFA) from 2011 to 2019, as Vice-President Stewardship and as President, has made me acutely aware of and sensitive to important faculty issues, and that experience has been immensely helpful in my work on the Human Resources Committee as well as the general work of the Board.

Currently, I am a member of the Campus Planning Committee responsible, in part, for oversight of the construction of the new building (808 Royal Avenue), and I am keenly interested in continuing to work with the Board to see that project through to successful completion.

My contributions and commitment have garnered me the respect of my peers on the Board. This is a position I greatly enjoy, and I know that I can continue to bring a multifaceted perspective and a deep understanding of faculty issues to discussions and decisions going forward.

I would greatly appreciate your support for my election to the position of faculty representative on the College Board.
